SELF COILING GARDEN HOSES

A Revolution in Gardening

It's about time someone came up with a hose that's not a hassle to use. This 50 foot Coiled Hose takes the hassle out of washing your car, watering your lawn and much more! It uncoils to a full 50 ft so you can move it around without those annoying tangles or kinks you get with conventional hoses. And, when you're done, it automatically recoils for quick and easy storage.

These hoses are not only durable, flexible and compact, but they also offer superior bursting strength when compared to some other economy coil hoses. The full 1/2" diameter of this hose will also provide you with 33% more spraying pressure than a 3/8" diameter coil hose.

The recoil memory of our coil hose means less hassle for you. Extraordinarily tough, this hose is resistant to abrasion and over-stretching, damage caused by kinking and changes in temperature.

Our Self-Coiling kink-resistant Garden Hose is the perfect solution for gardeners who don't want to struggle with heavy, tangled hoses. This hose stretches just enough to follow you around the garden, and then springs back into place for convenient storage. Constructed of lightweight, polyurethane with press-click fittings, this garden hose offers superior strength and lasting durability. The included spray nozzle features seven different spray patterns to accommodate all of your watering needs, including jet.

These industrial strength coil hoses are extraordinarily tough and resistant to abrasion, over-stretching, and kink damage. Outstanding memory, flexibility, and lightweight, less fatiguing to use, and uses press-click fittings. Our self coiled hose is suitable for jobs around the house, garden, garage, boat, RV, camping, or wherever a light-weight compact hose is needed. Unique self-coiling hose system is engineered to make watering and cleaning even easier. Rated at 150 psi.

Forget those old style yard hoses made of heavy, wet, knotted rubber or plastic to trip over and mess up your clothing! Where coiling into a roll and storing is next to impossible. And they are just too heavy to move so you have it left in the garden as a huge heap of rubber moist and warm enough for nesting reptiles and rodents. They also develop cracks on points of bends and twists in a matter of months leaving you covering the whole length of the hose with masking tapes

Self Coiling garden Hoses are guaranteed to make your life easier! When you're finished, this self-recoiling 50-foot hose jumps back together to store in just 30"L x 3¾"W of compact space, and weighs less than two pounds!

This ½" inch polyurethane hose material has outstanding memory and flexibility. Our 50' self-storing coil Hoses more than pay for themselves by not having to buy a hose reel and constant replacements.

Customer review:

Thanks, KASB This Hose is LIGHT- weight and Efficient!,

SELF COILING GARDEN HOSES

A Revolution in Gardening

I bought this hose when it first hit the market from your store at Marathahalli and am extremely pleased with it. Performance is great and the water pressure is fine, but the best features of this hose are that it's very lightweight and it stores so easily. I live on a 1/4 acre lot FULL of flowers, veggies and trees, and dragging those heavy, cumbersome hoses around can be exhausting. This hose is SO much lighter- fills the bill for women, seniors and anyone who wants to conserve their energy for more important things (like pulling weeds!) Storage? No problem. Hammer a stake or a PVC pipe in the ground a short distance from your water outlet and slide the coiled hose over the stake easy and convenient! I highly recommend this product!

Coil Hoses are guaranteed to make your life easier! Forget those old style yard hoses made of heavy, wet, knotted rubber to trip over and mess up your clothing! When you're finished, this self-recoiling 50-ft hose jumps back together to store in just 30"L x 3.75"W of space.

Be sure to purchase your favorite hose accessory like sprinklers and watering wands from our store for your colorful new Coil edHose.
